M		
卐	²) 1) ³³ .	The device according to claim 90 wherein the therapeutic agent comprises a
2	gene therapy	- 1 / · · · · · · · · · · · · · · · · · ·
1/	94.	The device according to claim 89 wherein the bioabsorbable element
2	-	eachs for subsequently receiving a therapeutic agent.
1	95.	The device according to claim 94 wherein the receiving means comprises a
2	radiation ager	1
1	96.	The device according to claim 94 wherein the receiving means comprises a
2	gene therapy	agent.
1	97.	The device according to claim 94 wherein the receiving means comprises a
2	chemotherapy	y agent.
1	98.	The device according to claim 89 further comprising a marker element in
2	contact with t	the bioabsorbable element.
1	99.	The device according to claim 98 wherein the marker element is a radiopaque
2	marker eleme	ent located generally centrally within the bioabsorbable element.
1	100.	The device according to claim the 99 wherein the radiopaque marker element
2	is a chosen or	ne of a permanent marker element and a temporary marker element.
1	101.	The device according to claim 89 wherein the bioabsorbable element is
2	remotely visu	alizable in its post-delivery state by at least one of ultrasound, mammography
3	and MRI.	
1	102.	The device according to claim 89 wherein the bioabsorbable element is softer
2	in its post-del	livery state than in its pre-delivery state.
1	103.	The device according to claim 89 wherein the bioabsorbable element is
2	physically dif	ferent in its post-delivery state from its pre-delivery state.
1	104.	A target tissue localization device comprising:
2		a bioabsorbable element in a pre-delivery state prior to its delivery to a
3	soft tissue site	e of a patient; and
4		said bioabsorbable element being of a material which is in a post-delivery state
5	at the target th	issue site, the bioabsorbable element being a therapy-delivery bioabsorable
6	element capal	ble of delivering diseased tissue therapy at the target tissue site when in the post-
7	delivery state	. /
1	105.	The device according to claim 104 wherein the bioabsorbable element
2	comprises a ti	herapeutic agent, the therapeutic agent comprising a chemotherapy agent.
1	106.	The device according to claim 104 wherein the bioabsorbable element
2	comprises a t	erapeutic agent, the therapeutic agent comprising a radiation agent.
	· · · · · · · · · · · · · · · · · · ·	

/ .				
l	107.	The device according to claim 104 wherein the bioabsorbable element		
2	comprises a t	herapeutic agent, the therapeutic agent comprising a gene therapy agent.		
l	108.	The device according to claim 104 wherein the bioabsorbable element		
?	comprises me	eans for subsequently receiving a therapeutic agent.		
	109.	The device according to claim 108 wherein the receiving means comprises a		
2	radiation ager	nt.		
l	110.	The device according to claim 108 wherein the receiving means comprises a		
2	gene therapy	agent.		
	111.	The device according to claim 108 wherein the receiving means comprises a		
2	chemotherapy	y agent.		
	112.	The device according to claim 104 further comprising a marker element in		
2	contact with t	he bioabsorbable element.		
	113.	The device according to claim 112 wherein the marker element is a radiopaque		
2	marker eleme	nt located generally centrally within the bioabsorbable element.		
	114.	The device according to claim the 113 wherein the radiopaque marker element		
2	is a chosen or	ne of a permarent marker element and a temporary marker element.		
l	115.	The device according to claim 104 wherein the bioabsorbable element is		
2	remotely visu	alizable in its post-delivery state by at least one of ultrasound, mammography		
3	and MRI.			
	116.	The device according to claim 104 wherein the bioabsorbable element is softer		
2	in its post-del	ivery state than in its pre-delivery state.		
	117.	The devide according to claim 104 wherein the bioabsorbable element is		
2	physically dif	ferent in its post-delivery state from its pre-delivery state.		
l	118.	A target tissue localization method comprising:		
?		taking tissue from a target tissue site within a patient;		
}		selecting a bioabsorable element that is capable of yielding therapy via		
ļ	delivery of a	therapeutic agent to or activating a therapeutic agent within the bioabsorable		
i	element;			
,		positioning the bioabsorbable element at the target tissue site;		
,		testing the tissue; and		
3	Ä	if the testing indicates a need to do so relocating the target tissue site by		
)	finding the bi	oabsorbable element by palpation of the patient to feel the bioabsorbable		

Application No.: 09/900,801

element/

10

- 119. The method according to claim 118 wherein the positioning step is carried out using said bioabsorbable element and a radiopaque marker.
- 120. The method according to claim the 119 wherein the radiopaque marker element is a chosen one of a permanent marker element and a temporary marker element.
- 121. The method according to claim 118 wherein the remotely visualizing step is carried out to by at least one of ultrasound, mammography and MRI.
- 122. The method according to claim 118 further comprising the step of selecting the bioabsorbable element so that after positioning at the target site, the bioabsorbable element has a hardness of at least about 1.5 times as hard as the surrounding tissue.
- 123. The method according to claim 118 further comprising the step of effectively preventing blood from contacting the bioabsorbable element until the bioabsorbable element is positioned at the target site.
- 124. The method according to claim 123 wherein the effectively preventing step is carried out by using a hemostatic bioabsorbable element having a non-hemostatic biodegradable outer layer.
- 125. The method according the claim 118 wherein the positioning step is carried out using a bioabsorable element with a remotely sensible marker element at a generally central location within the bioabsorbable element.
- 126. The method according to claim 118 wherein the tissue taking step is carried out at a biopsy site as the target tissue site.
- 1 127. A target tissue localization method comprising:
 2 taking tissue from a target tissue site within a patient;
 3 selecting a bibabsorable element that is capable of yielding therapy via
 4 delivery of therapy or activating therapy within the bioabsorable element;

5 positioning the bioabsorbable element at the target tissue site;

testing the tissue; and

- if the testing indicates a need to do so relocating the target tissue site by finding the bioabsorbable element by locating inflammation at the target tissue site caused by the bioabsorbable element.
- 128. The method according to claim 127 wherein the positioning step is carried out using said bioabsorbable element and a radiopaque marker.
- 129. The method according to claim the 128 wherein the radiopaque marker element is a chosen one of a permanent marker element and a temporary marker element.

130.	The method according to claim 127 wherein the remotely visualizing step is	S
carried out to l	by at least one of ultrasound, mammography and MRI.	

- The method according to claim 127 further comprising the step of selecting 131. the bioabsorbable element so that after positioning at the target site, the bioabsorbable element has a hardness of at least about 1.5 times as hard as the surrounding tissue.
- 132. The method according to claim 127 further comprising the step of effectively preventing blood from contacting the bioabsorbable element until the bioabsorbable element is positioned at the target site.
- The method according to claim 132 wherein the effectively preventing step is 133. carried out by using a hemostati¢ bioabsorbable element having a non-hemostatic biodegradable outer layer.
- The method according the claim 127 wherein the positioning step is carried out using a bioabsorable element within a remotely sensible marker element at a generally central location within the bidabsorbable element.
- The method according to claim 127 wherein the tissue taking step is carried out at a biopsy site as the target tissue site.
- 136. A target tissue localization method comprising: 1 taking tissue from a target tissue site within a patient; selecting a bioabsorable element that is capable of yielding therapy via delivery of therapy or activating therapy within the bioabsorable element; 4 positioning the bioabsorbable element at the target tissue site; 5 6 testing the tissue; and

if the testing indicates a need to do so relocating the target tissue site by finding the bioabsorbable element by remotely visualizing the bioabsorbable element.

- The method according to claim 136 wherein the positioning step is carried out using said bioabsorbable element and a radiopaque marker.
- The method according to claim the 137 wherein the radiopaque marker element is a chosen one of a permanent marker element and a temporary marker element.
- 139. The method according to claim 136 wherein the remotely visualizing step is carried out to by at least one of ultrasound, mammography and MRI.
- 140. The method according to claim 136 further comprising the step of selecting the bioabsorbable element so that after positioning at the target site, the bioabsorbable element has a hardness of at least about 1.5 times as hard as the surrounding tissue.

5

Application No.: 09/900,801

		I	
1	151.	The method according to claim 150 wherein the delivering step is carried out	
2	using at least one of:		
3		a chemotherapy agent;	
4		a radiation-emitting element;	
5		thermal energy;	
6		ionization energy;	
7		gene therapy;	
8		vector therapy;	
9		electrical therapy;	
10		vibrational therapy; and	
11		anti-angiogenesis.	
1	152.	The method according to claim 148 further comprising relocating the target	
2	tissue site by finding the bioabsorbable element.		
1	153.	The method according to claim 152 wherein the relocating step is carried out	
2	by a chosen o	ne of palpation and remote visualization.	
1	154.	The method according to claim 152 wherein the relocating step is carried out	
2	by remote vis	ualization using at least one of ultrasound, mammography and MRI.	
1	155.	The method according to claim 152 wherein the relocating step is carried out	
2	prior to the m	edically treating step.	
1	156.	The method according to claim 155 wherein the medical treating step	
2	comprises ren	noval of tissue.	
1	157.	The method according to claim 148 wherein the positioning step is carried out	
2 .	using a remot	ely visulizable bioabsorable element, and wherein the relocating step comprises	
3	guiding a treatment device to the bioabsorable element by at least one of remote visualization		
4	and palpation	. /	
1	158.	The method according to claim 148 wherein the medically treating step	
2	comprises act	ivating the site locatable by the bioabsorbable element.	
1	159.	The method according to claim 158 wherein the activating step is carried out	
2	by at least on	e of:	
3	1	injecting a radiation-emitting element at the vicinity of the target site;	
4	1	externally activating a therapeutic means within the bioabsorable element;	
5		externally irradiating the target site; and	
6		triggering a substance carried by the element.	

1

160. The method according to claim 148 wherein the tissue sample taking step is

2 carried out at a diopsy site as the target tissue site.
